Importing the Book's Code into Your RadRails Workspace

1. **Start RadRails.**
2. **In the RadRails main menu, select File ⇒ Import ⇒ Existing Projects into Workspace.**

   An Import dialog box appears.
3. **In the resulting Import dialog box, choose Select Archive File.**
4. **Browse to the archive file that you downloaded from the *Ruby on Rails For Dummies* Website.**

   The file's name is `workspace.zip`. After you've selected the archive file, the names of the file's projects appear in the **Projects** area of the Import dialog box. (The projects' names are album, Chapter_1, and so on.) Beside each project's name is a checkbox.
5. **Put checkmarks next to the projects you want to import.**
6. **In the Import dialog box, click Finish.**

After following these steps, the Rails Navigator view displays a list of projects. But look at the Servers view. This view may still be empty. To add a server to a particular project, do the following:

1. **Select a project in the Rails Navigator view.**
2. **In the RadRails main menu, select File ⇒ New ⇒ Server ⇒ WEBrick Server.**
3. **Click Next.**
4. **Click Finish.**
