How to Create Javadoc Pages

Add Javadoc comments to your code

```
// A demonstration of the use of the int type for currency.

public class UseIntForCurrency {

    /**
     * The class’s main method.
     */
    public static void main(String[] args) {
        Scanner keyboard = new Scanner(System.in);
        double amount = keyboard.nextDouble();
        int cents = (int) (amount * 100);
        System.out.println(cents / 5);
        System.out.println(" nickels and ");
        System.out.println(cents % 5);
        System.out.println(" cents");

        int centsRemaining = cents % 5;
        double dollarsRemaining = centsRemaining / 100.00;
        NumberFormat currency = NumberFormat.getCurrencyInstance();
        System.out.println(currency.format(dollarsRemaining));
    }
}
```

Select your project in the Eclipse’s Package Explorer
Select Project→Generate Javadoc

In the Generate Javadoc dialog, click Finish
Click Yes in order to accept the default location for the Javadoc files.

Wait for the <terminated> message in Eclipse’s Console view.

To see your new Javadoc pages, select Navigate→Open Attached Javadoc.
Voilà!
