

INDEX

- Abel's identity, 131
- Abel's test, 131–132
- Abel's theorem, 463–464
- absolute convergence, 113–114
 - implication of conditional convergence, 114
- absolute value, 7
 - reverse triangle inequality, 9
 - triangle inequality, 9
- algebraic properties of \mathbb{R}^k , 11–13
- algebraic properties of continuity, 184
- algebraic properties of limits, 91–92
- algebraic properties of series, 110–111
- algebraic properties of the derivative, 244
- alternating series, 115
 - alternating series test, 115–116
- analytic functions, 481–482
 - complex analytic functions, 483
 - counterexamples, 482–483
 - identity principle, 486
 - zeros of, *see* zeros of complex analytic functions
- antiderivatives, 361
 - for $f : [a, b] \rightarrow \mathbb{R}^p$, 370
 - of complex functions, 408
 - on star-shaped sets, 411–413
 - path-independence, 408–409, 415
- Archimedean property, 5–6
- argument, 29–30
 - continuity of, 182–183
 - continuous arguments, 445–446
- average values, 362–363

- balls, 48–49
 - closed balls, 48–49
 - open balls, 48–49
- Bernoulli numbers, 513
- bijective, *see* one-to-one correspondence

- Bolzano-Weierstrass theorem, 66–68
 - for sequences, 99–100
- boundary points, 50–52
- bounded functions, 142
- bounded sets, 42–43

- Cantor function, 229–230
- Cantor set, 80–81, 133–134, 383
- Casorati-Weierstrass theorem, 498–499
- Cauchy completeness, 106–107
- Cauchy condensation test, 117–119
- Cauchy integral theorem
 - triangle lemma, *see* triangle lemma
- Cauchy principal value, 365–366
- Cauchy sequences, 104–105
 - convergence of, 105–106
- Cauchy's inequalities, 437
- Cauchy's integral formula, 428–433
 - converse of, 436–437
 - extension to higher derivatives, 437
 - for simple closed contours, 432–433
 - on circles, 429–430
 - on open connected sets, 430–432
 - on star-shaped sets, 429
- Cauchy's integral theorem, 420–422
 - consequence, *see* deformation of contours
- Cauchy-Riemann equations
 - motivation, 297–300
 - necessity, 300–302
 - sufficiency, 302–304
- Cauchy-Schwarz inequality, 15–16
 - for integrals, 384
- chain rule, 245–246
 - for $f : D \rightarrow \mathbb{C}$, 296
 - for $f : D^k \rightarrow \mathbb{R}^p$, 283–284
- change of variables
 - for complex integrals, 389
 - for real integrals, 367

- circles, 30–31, 391
- closed sets, 58–59
 - relatively closed, 61
- closure, 59–60
- codomain, 136
- compact sets, 70–71
 - Heine-Borel theorem, 71
- comparison test, 117
 - limit comparisons, 119–120
- completeness property of \mathbb{R}^k , 13–14
- complex analytic functions, *see* analytic functions
- complex conjugate, 24–25
- complex integrals
 - change of variables, 389
 - fundamental theorem of calculus, 390
 - inequalities, 388–389
 - line integrals, *see* complex line integrals
 - linearity property, 388
 - of uniformly convergent sequences, 472
 - over an interval, 387–388
- complex line integrals, 394–395
 - algebraic properties of, 395–397
 - independence of parametrization, 398–399
 - inequalities, 398
- complex numbers, 19–24
 - algebraic properties of, 21–22
 - field properties of, 22–23
 - imaginary part, 21
 - integer powers of, 23
 - matrix representation, 34–35
 - multiplication, 19
 - order properties of, 23
 - powers of, 31
 - real part, 21
 - roots of, 31–33
- conditional convergence, 113–114
 - arbitrary rearrangements, 124–125
 - relation to absolute convergence, 114
- conformal mapping, 524–530
 - disks to disks, 529–530, 532
 - half-planes to disks, 524
 - rectangular regions to hyperbolas, 529

 - examples, 477–481
- Taylor’s theorem
 - for complex functions, 475–477
 - for real functions, 474–475
- Taylor’s theorem with remainder, 252–253
 - for $f : D^k \rightarrow \mathbb{R}^p$, 289
 - for $f : D^k \rightarrow \mathbb{R}$, 285–288
- test for divergence, 113
- Tietze extension theorem, 220–222
- topological properties of continuity, 188–191
- triangle inequality, 9
- triangle lemma, 400–402
 - refinement of, 403–404
- trigonometric functions, 154–155
- uniform continuity
 - definition, 198
 - examples of, 199–201
 - extensions to the closure, 206–207
 - implication by continuity on compact sets, 201–202
 - preservation of boundedness, 203
 - preservation of Cauchy sequences, 202–203
- uniform convergence, 210–211, 216–217
 - and integration, 367–369
 - M-test, 214–215
 - of complex differentiable functions, 452–453
 - relationship with continuity, 211–212, 218
 - uniformly Cauchy, 212–213
- uniformly Cauchy sequences, 212–213
- upper bounds, 44
 - least upper bound, 45–47
- upper sums, *see* Riemann sums
- vertices, 391
- Weierstrass M-test, 217–218
- well-ordered property, 6
- winding numbers, 404–406
 - geometric interpretation of, 446–447
 - of rectangles, 407

INDEX

547

of simple closed contours, 432,
448–450
on connected subsets, 406–407

zeros of complex analytic functions, 484
isolated zeros, 484–486
multiplicities, 484–486
